

Migo LMS: Training Built for the Industry

Empowering rail operators with a future-proof LMS that supports compliance, competency, and workforce readiness.

A Learning Platform Designed for Rail

Our Learning Management System (LMS) is built on the world's leading open-source learning platform trusted by major organisations across a variety of sectors, including rail operators and Network Rail.

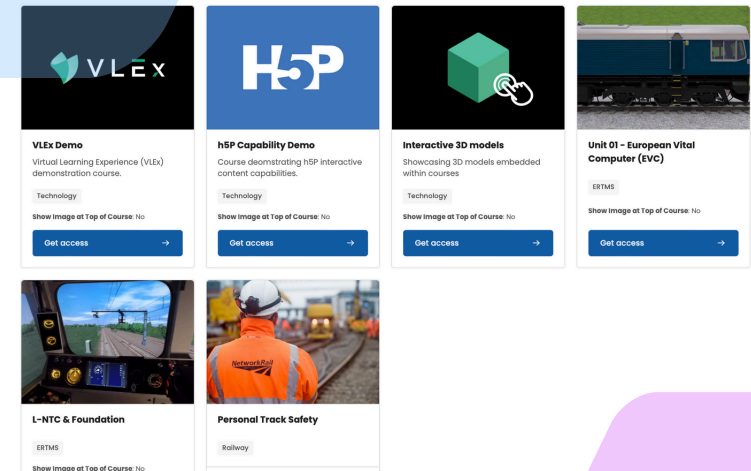

We have taken this proven platform and customised it specifically for the rail industry. That means aligning it with rail training requirements, safety regulations, and compliance standards, ensuring it not only delivers learning effectively but also supports the unique operational needs of the sector.

The LMS can be integrated with existing Competency Management Systems (CMS) to provide a seamless link between training delivery and competency tracking. This integration allows organisations to connect learning directly with workforce skills and compliance frameworks, ensuring complete visibility of staff capability across operations.

Key Features

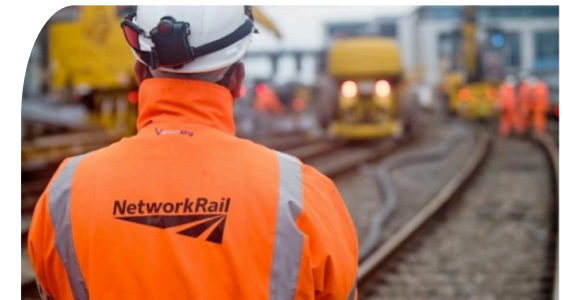

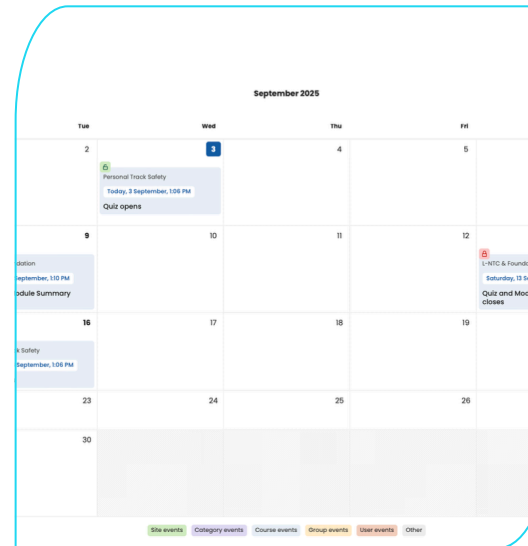

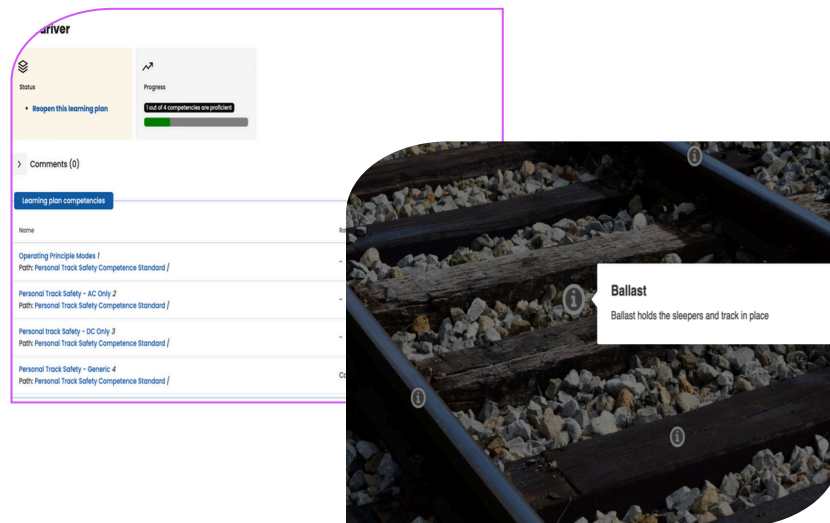

Our LMS includes a range of powerful features designed to support digital and blended learning in a rail context:

- **Quizzes and Assessments:** Create flexible assessment formats with auto-marking, reducing administrative workload and ensuring consistency.
- **Learning Plans:** Personalise training pathways by role, so each learner follows the most relevant and efficient route to competency.
- **Certificates and Badges:** Provide automatic recognition of achievement, helping motivate learners and demonstrate compliance.
- **Scheduling and Reminders:** Keep learners on track with clear scheduling, automated notifications, and deadline reminders.
- **Reporting and Analytics:** Gain instant insight into compliance levels and learner progress, enabling data-driven decision-making.
- **Custom Branding:** Align the platform with your organisation's look and feel for a seamless learner experience.
- **SCORM and xAPI Support:** Deliver industry-standard e-learning content without compatibility issues.
- **Mobile and Offline Access:** Ensure learners can access training wherever they are, even trackside.

Benefits for Rail Operators

The LMS has been designed not just to deliver training, but to deliver measurable outcomes for rail organisations:

- **Aligned to Rail Standards:** Training can be mapped directly to industry competency frameworks, ensuring regulatory and operational alignment.
- **Role-Specific Learning:** Training can be targeted to the precise requirements of each role, reducing wasted time and increasing relevance.
- **Audit-Ready Compliance:** Robust reporting tools provide clear, verifiable records of compliance for audits, regulators, and internal reviews.
- **Full Training Histories:** Track progress and maintain a complete record of workforce development across an organisation.
- **Improved Adoption:** With a rail-branded, intuitive interface, learners engage more effectively with training programmes.

Use Case: Freightliner ETCS Training

Freightliner, one of the UK's largest freight operators, needed a scalable way to prepare its workforce for the introduction of ETCS. With hundreds of drivers and maintainers requiring training, the challenge was to deliver interactive learning at scale.

Migo Consult led the implementation of a new LMS, from requirements capture through to system rollout. The result was a platform that enabled interactive ETCS training, streamlined compliance reporting, and provided a scalable foundation for future digital learning programmes.

Why Choose Our LMS?

Training in rail is critical to safety, compliance, and performance, and operators need solutions that are both reliable and adaptable. Our LMS is built on a robust, proven platform and customised for the rail industry to meet sector-specific training and regulatory needs.

It offers a flexible and scalable solution that integrates with existing CMS to give complete visibility of workforce skills and readiness. By combining the reliability of Moodle with our sector expertise, we provide a system that is both proven globally and tailored locally, a platform built for rail.
